Environmental Monitoring and Analysis Unit
Polynuclear Aromatic Hydrocarbons in Tissue Samples
Project Narrative

Client: Tesoro Hawaii Corporation Batch No.: B0301
Project No.: 39650 Package No.: 1529
Entered By: Richard Purdy Date: January 11, 1999

Polynuclear Aromatic Hydrocarbons In Tissue Samples

Sample Receipt

Twenty-two (22) tissue samples were received intact and in good condition by Arthur D. Little, Inc. on September 28 and November 4, 1998 on behalf of Tesoro Hawaii Corporation. All pertinent sample receipt information is noted on the chain of custody records included as part of this deliverable. Data for the following samples are reported in this package:

Blackfoot 1	Yellowfoot 1	Blackfoot 4A ²	Site 2N Kipu Jar 2
Blackfoot 2 ¹	KK Crab 092398 ¹	Blackfoot 4B ²	Site 3 Kipu Jar 2
Blackfoot 3 ¹	KK Urchin 1 ¹	Site 1 Ahu Jar 2	Site 4 Kipu Jar 2
Blackfoot 5 ¹	KK Urchin 2 ¹	Site 2S Kipu Jar 2	Site 5 Nini Jar 2
Blackfoot 6	KK Urchin 3 ¹	Site 2S Kipu Jar 3	Site 1 Ahu
Site 2S Kipu	Site 2N Kipu	Site 3 Kipu	Site 4 Kipu
Site 5 Nini	Site 6 Kee		

¹ - Sample not analyzed

² - Samples combined, prepared and analyzed together

Laboratory Methods

These samples were prepared and analyzed for Parent and Alkyl IIomologue Polynuclear Aromatic Hydrocarbons in accordance with the laboratory procedures described in the quality assurance workplan for the project. Quality control samples include a preparation blank, matrix spike/matrix spike duplicate (MS/MSD), and reference material samples.

Preparation

These tissue samples were prepared by homogenizing portions of each sample and serially extracting with methylene chloride. The extracts were cleaned-up using size exclusion chromatography and alumina columns to remove non-target matrix

Project Narrative

interferences. The solvent extracts were then concentrated to a known volume and submitted for analysis.

Analysis

The sample extracts were analyzed for Parent and Alkyl Homologue Polynuclear Aromatic Hydrocarbons using gas chromatography/mass spectrometry in the selected ion monitoring mode (GC/MS/SIM). The GC/MS is tuned using PFTBA at the start of each analytical sequence, before the calibration. Continuing calibration standards are analyzed after every fifteen to eighteen samples and at the end of the sequence. Target compounds are quantified from the average response factor (RRF) of the calibration curve. Alkyl homologues are quantified using the RRF of the parent compound.

Quality Assurance/Quality Control

Quality assurance and quality control procedures for the analyses are documented in the laboratory quality assurance plan and standard operating procedures (SOPs). The preparation and analysis data are contained in ADL packages 1529. Quality assurance audits were performed on all data generated as part of this deliverable. Please note the following:

- Initial and continuing calibration standards met control limit requirements.
- All surrogate and matrix spike compound recoveries met control limit requirements.
- Target compound recoveries in the standard reference materials (SRM) exceeded quality control requirements for six of the thirteen certified recoveries. Re-analysis of the sample confirmed these results. Triplicate analyses of this SRM, analyzed as part of an interlaboratory comparison study during the same time period yielded results for all compounds within acceptable limits. The data are accepted without further qualification but associated results may be biased high.

Data Report

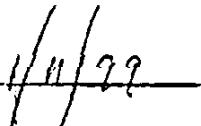

The final report includes the following components:

- Narrative – includes project discussion, sample listing, report qualifiers
- Chain of Custody – includes all signed chain of custody records and observation forms for the reported field samples.
- Data Tables – includes data summary, surrogate recovery summary and quality control results for all analyses

Polynuclear Aromatic Hydrocarbons In Tissue Samples
Project Narrative

The method detection limit (MDL) and minimum reporting limits (MRL) were adjusted for sample size, sample split and pre-injection volume (PIV). The minimum reporting limits (MRL) were calculated based on the low calibration standard, 25 µg/mL.

Qualifiers used in reporting of the analytical data are described in the following table.

Table 1: Report Qualifiers

Qualifier	Explanation
J	Concentration between the adjusted minimum reporting limit (MRL) and the adjusted method detection limit (MDL)
U	Concentration below MDL
D	Concentration quantitated from dilution analysis
B	Detected in the associated procedural blank
DO	Diluted out; result could not be measured

Additional qualifiers may be used as defined in the individual data reports or project narrative.
